Summary

Cybersecurity enthusiast pursuing B.Tech in Computer Science with a specialization in Cyber Security and Digital Forensics at Vellore Institute of Technology. Familiar with Java, Vulnerability Management, SIEM, Cloud Security and AWS basics. Interested in applying cybersecurity concepts to build secure and practical solutions.

Education

Vellore Institute of Technology **2023 – Present**
B.Tech in Computer Science – Cyber Security and Digital Forensics ***CGPA: 9.18***

Skills

Languages: Java, SQL, HTML, CSS, JavaScript
Cybersecurity: Vulnerability Management, Digital Forensics, Threat Intelligence & Analysis, Incident Response, SIEM, Network Security, Patch Management, Security Monitoring
Cloud: AWS, Cloud Security Fundamentals

Internship Experience

Viatris **Bengaluru, India**
Cyber Security Intern *Apr 2026 – Jun 2026*

- Gained practical exposure to enterprise cybersecurity processes, vulnerability management, and security practices in a corporate environment.
- Performed basic network reconnaissance using Nmap in a controlled environment to identify open ports and running services.
- Gained exposure to security controls, patch management, and basic risk mitigation practices used to address cybersecurity risks.

Happiest Minds Technologies **Bengaluru, India**
Cyber Security – Threat & Vulnerability Management Intern *Apr 2025 – May 2025*

- Worked with the Threat and Vulnerability Management team to review security findings and identify vulnerabilities affecting systems.
- Analyzed vulnerability severity and potential impact to understand remediation priorities and risk associated with identified findings.
- Gained practical exposure to patch management and vulnerability remediation processes.

Projects

Digital Forensics File Analyzer

- Developed a Python-based forensic utility to analyze digital evidence and extract file metadata including name, type, size, and timestamps.
- Implemented SHA-256 hashing to generate file fingerprints and support file integrity verification during forensic examination.
- Integrated rule-based analysis to assist in identifying suspicious file characteristics during preliminary forensic investigation.

Secure Image – Cryptography & Steganography

- Developed a Python-based application that encrypts confidential text and hides the encrypted message inside an image using steganography.
- Implemented extraction and decryption to retrieve hidden messages and recover the original text.
- Combined encryption and steganography to provide an additional layer of confidentiality for sensitive information.

Achievements

Leadership: Co-Lead, Design & Editing – Software Development Club; Core Member, Android Club R&D Team.
Activities: Contributor, GirlScript Summer of Code (GSSoC).

Certifications

AWS Certified Solutions Architect – Associate
Hackviser – Certified Cybersecurity Foundations
Cisco – Introduction to Cybersecurity
