Summary

Cybersecurity and Cloud enthusiast pursuing a B.Tech in Computer Science with a specialization in Cyber Security and Digital Forensics at Vellore Institute of Technology. Proficient in Java, Vulnerability Assessment, SIEM, EDR, AWS Fundamentals, and Cloud Security. Seeking to build secure and practical solutions.

Education

Vellore Institute of Technology **2023 – Present**
B.Tech in Computer Science – Cyber Security and Digital Forensics ***CGPA: 9.18***

Skills

Languages: Java, SQL, HTML, CSS, JavaScript
Cybersecurity Concepts: Vulnerability Management, Digital Forensics, Threat Intelligence & Analysis, Security Automation, Incident Response, SIEM, EDR
Cloud Technologies: AWS, Cloud Security Fundamentals

Internship Experience

Viatris **Bengaluru, India**
Cyber Security Intern *Apr 2026 – Jun 2026*

- Gained practical exposure to enterprise cybersecurity processes, security operations, and vulnerability-related activities in a corporate environment.
- Worked with security concepts and workflows related to identifying, assessing, and addressing potential security risks.

Happiest Minds Technologies **Bengaluru, India**
Cyber Security – Threat & Vulnerability Management Intern *Apr 2025 – May 2025*

- Worked with the Threat and Vulnerability Management team to understand vulnerability identification, assessment, prioritization, and remediation workflows.
- Gained hands-on exposure to security monitoring and analysis processes used to assess vulnerabilities across systems.

Projects

Digital Forensics File Analyzer

- Developed a Python-based forensic utility to analyze digital evidence and extract file metadata including name, type, size, timestamps, and other properties.
- Implemented SHA-256 hashing to generate unique file fingerprints and support file integrity verification during forensic examination.
- Designed the analysis workflow to help investigators examine files and identify changes in evidence through metadata and hash comparison.

Secure Image – Cryptography & Steganography

- Developed a Python-based application that encrypts confidential text and hides the encrypted message inside an image using steganography.
- Implemented the extraction process to retrieve the hidden message from the image and decrypt it to recover the original text.
- Combined encryption and steganography to provide an additional layer of confidentiality for sensitive information shared through images.

Achievements

Leadership: Co-Lead, Design & Editing – Software Development Club; Core Member, Android Club R&D Team.
Community: Contributor, GirlScript Summer of Code (GSSoC).

Certifications

AWS Certified Solutions Architect
Hackviser Certified Cybersecurity Foundations
Cisco – Introduction to Cybersecurity
